HOW TO VALIDATE???

reuses
some
concepts &
relationships

data graph

"Using Ontology Design Patterns To Define SHACL Shapes"

WOP 2018 (ISWC 2018) ; Monterey California, USA ; Presented by: Harshvardhan J. Pandit

1. Assumption: Open vs Closed

2. Inference

3. Existence

→ declare vs undeclared

→ completeness

can lead to surprising results

If I don't use a concept, do I care about its existence?

#3

- Define a model for data & relationships → AXIOMS
- Define constraints → restrictions
- Define 'correctness' ? → by following constraints
- Provide validation ? → by testing against constraints & assessing correctness

"Using Ontology Design Patterns To Define SHACL Shapes"

WOP 2018 (ISWC 2018) ; Monterey California, USA ; Presented by: Harshvardhan J. Pandit

Axioms may not be applicable because:

- Not all concepts / relations from ontology are being used in a data graph
- Concepts / relations are used, but their semantic meaning has changed

- ODP is more generic than an ontology
i.e. abstraction
- ODP can be more specific to the use-case
i.e. domain / context specific
- ODP contains only needed axioms
i.e. only covering required concepts / relationships
- ODP is modular
i.e. can be combined or used individually

Benefits

1. Fits model of data graph → *how data is populated in context*
2. Modular → *reuse! specialise! abstraction!*
3. Easier to integrate → *into larger patterns & ontologies*

SHACL

Shapes and Constraints Language

W3C Recommendation, 20 July 2017

<https://www.w3.org/TR/shacl/>

“SHALL - CORE”

- closed-world
- defined using RDF
- selectors
- report generation
- like ShEx

“Using Ontology Design Patterns To Define SHACL Shapes”

<http://openscience.adaptcentre.ie/> | pandith@tcd.ie | [@coolharsh55](https://twitter.com/coolharsh55)

WOP 2018 (ISWC 2018) ; Monterey California, USA ; Presented by: Harshvardhan J. Pandit

- Aim: Automate validation from data model i.e. ODP → SHACL
- Step1: Identify relevant OWL statements within constraint
- Step2: Generate Corresponding SHACL Shape

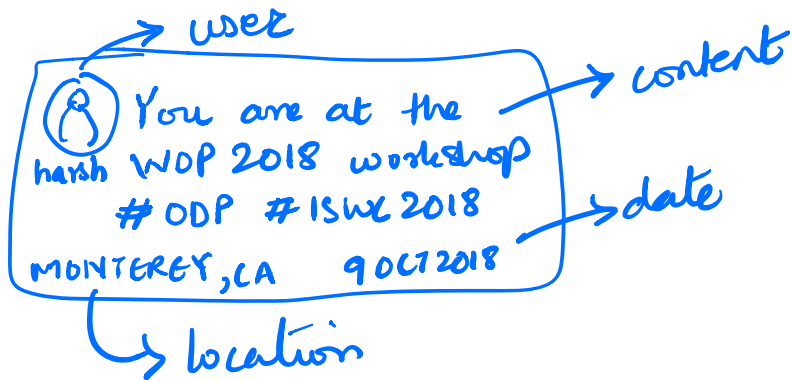

Requires: Mapping OWL → SHACL

“Using Ontology Design Patterns To Define SHACL Shapes”

<http://openscience.adaptcentre.ie/> | pandith@tcd.ie | [@coolharsh55](https://twitter.com/coolharsh55)

WOP 2018 (ISWC 2018) ; Monterey California, USA ; Presented by: Harshvardhan J. Pandit

```
ex: TweetValidator
  a sh:NodeShape
  targetClass ex: Tweet .
```

SHACL SHAPE

Tweet has

- exactly 1 user → min: 1 max: 1
- exactly 1 content → type: Text
- exactly 1 date → type: Timestamp
- 0 or 1 location → max: 1
- type: GPS co-ordinates

Yes.

But the aim here is to validate the data graph that uses many ontologies, and where only some concepts/relationships are used.

Therefore, if SHACL shapes are generated from an ontology, they will have the same limitation as using the OWL axioms itself.

argument : Generate an ontology for data graph
vs
Generate ODPs for data graph

- Coherence
- If all constraints (shapes) are satisfied then the data can be said to be validated, and this information can be incorporated back into the data graph
- Validations can thus be ‘layered’ on top of each other
- Can the ODPs also be thus ‘layered’ or combined in this manner to create an ontology for representing the data model of the graph?

open question!

“Using Ontology Design Patterns To Define SHACL Shapes”

<http://openscience.adaptcentre.ie/> | pandith@tcd.ie | [@coolharsh55](https://twitter.com/coolharsh55)

WOP 2018 (ISWC 2018) ; Monterey California, USA ; Presented by: Harshvardhan J. Pandit

Use the ODP to visualise SHACL Shapes

ex: Presentation Shape

a sh:NodeShape

targetClass ex:Presentation

sh:Property [

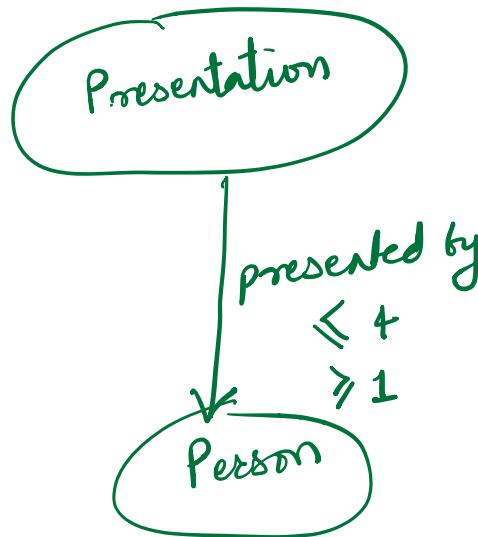

sh:Path ex:presenter

sh:Class ex:Person

sh:minCount 1

sh:maxCount 4

].

WOP 2018 (ISWC 2018) ; Monterey California, USA ; Presented by: Harshvardhan J. Pandit

Future Work

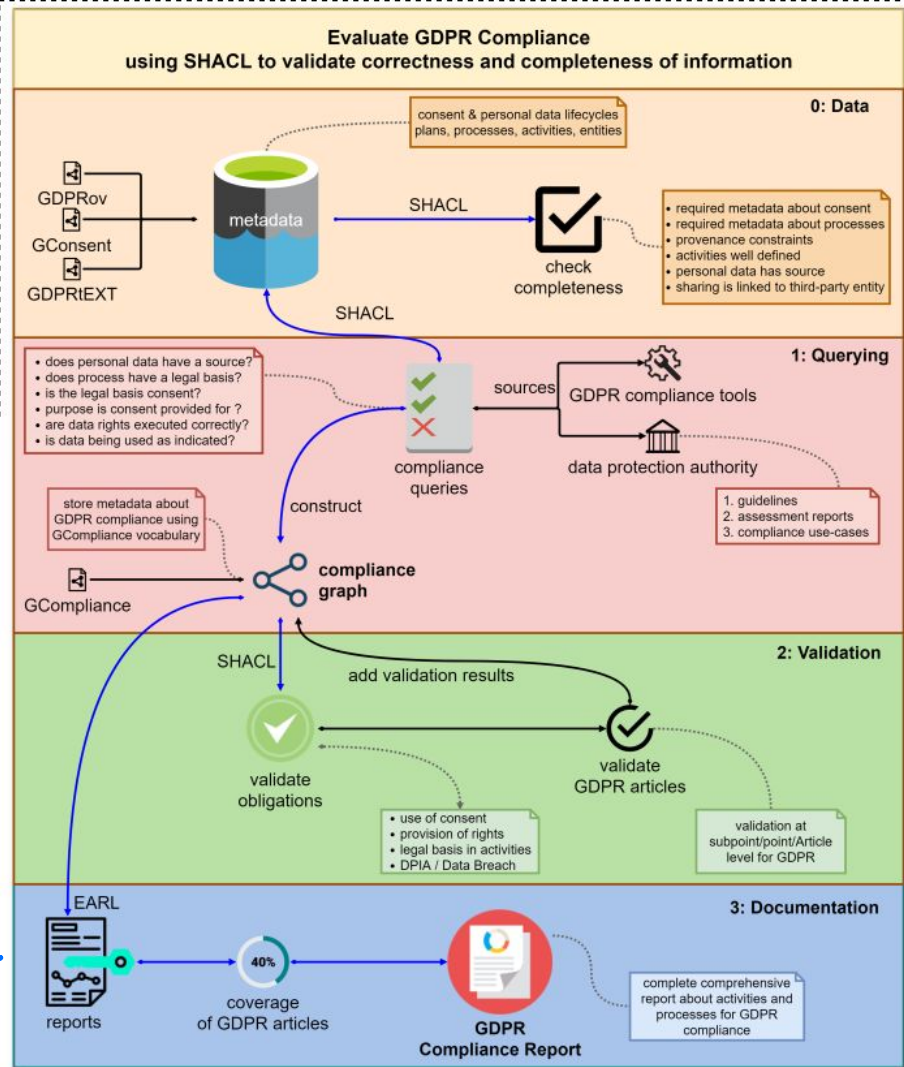

1. SHACL-SPARQL
2. OWL2SPARQL
3. Recursive Constraints

Target Application: *→ my PhD topic*
GDPR Compliance

Modular Obligations → ODP

ODP → validate using SHACL
